KERBL

Top quality animal comfort

improved animal health

Animals have the need to rub and scratch themselves. Cattle brushes are an important part of general hygiene and no modern cowshed should be without one. The animals clean themselves and get rid of lice, mites, and other parasites. The development of eczema or fungal infections is reduced or even generally prevented. When animals are healthy, then you have a calm, relaxed herd.

Improved yield

Healthy and cared-for cattle and goats can achieve improved yields because the feeling of well-being is an important factor. The large-area brushing and massaging increases blood circulation in the skin, promotes heat dissipation and stimulates the metabolism. The stimulated blood circulation can increase milk yields and increase the frequency of „in-heat" periods.

Variety and occupation

The animals become calmer, their well-being increases through the use of a scratch brush, and they are also occupied. Undesirable animal behaviours, such as mutual suckling with calves, are also reduced.

Easy assembly

Our electric cow cleaning machines are easy to install and nearly maintenance-free. Greasing at the pressure lubrication points and prompt replacement of brush rollers extend service life and attractiveness to animals. The devices are suitable for outside installation, e.g. under a projecting roof.

Robust and effective

Not every cow brush achieves the same result. It should particularly ensured that the brush can be operated by the animal easily, reaches as many body parts as possible, has a good cleaning effect, does not injure the animal, requires little maintenance, and works problem-free.
The importance of a robust and long-lasting design is demonstrated by the fact that, in a herd of 30 animals, each cow brushes herself for 10 minutes per day on average, and so a cow-cleaning machine operates for several hours every day.

Smart and secure

Further important aspects in the selection of a suitable cow brush include safe, injury-free use and convenient operation. This is where the intelligent electronics of the HAPPYCOW brushes convince through error-free, low-maintenance operation. With their clearly visible display of the operating status, the controls provide a variable adjustment option of the brush running time (10 to 300 s). The changing direction of the brush after every activation ensures even wear of the brushes. The torque-operated safety shutdown stops the brush when it encounters too much resistance, thus ensuring safety in the cowshed.

Installation location

So that your animals enjoy an optimum brushing experience, the installation location of the brushes should be selected with care. Select a location which has a lot of free space, so that other animals can get past the animals who are scratching themselves, and that low-ranking animals also get their brushing time. Ensure that dead-ends and dark corners are avoided, and position the brushes as far as possible from feeding and drinking areas, in order to prevent contamination from these.

Find the right brush type for your application:

Brushes for Animals	The benefits	suitable for	Installation location
HAPPYCOW Uno	installation on half-height wall possible	adult cattle	wall, half-height wall
HAPPYCOW Duo	simultaneous brushing of back and flank	adult cattle	Wall
HAPPYCOW MaxiSwing	accessible from all sides - large brush surface	adult cattle	wall, pillar
HAPPYCOW MidiSwing	accessible from all sides	suitable for cattle older than 1 year and adult cattle	wall, pillar
HAPPYCOW MiniSwing	accessible from all sides	Calves and goats	wall, pillar
HAPPYCOW Free Maxi	low-cost and low-maintenance	Large animals	wall, pillar
HAPPYCOW FlexiSwing	low-cost and low-maintenance	adult cattle, young animals and calves from 2 months, horses	wall, pillar
Post Scrubber	Scratch Brush for Outdoor Use	cattle, calves, goats, horses, etc.	for floor/ground installation on compacted surfaces or pasture land
HAPPYCOW Bully / Scratch Plate	very robust construction, designed for bull fattening	Beef fattening	Stabling, wall
Cattle Brush Texas/Cattle Brush 29325	low-cost and low-maintenance	cattle, calves, goats, horses, etc.	wall, pillar
Scratch Brush	good value and low maintenance - minimum space requirement - flexible in use	cattle, calves, horses, etc.	wall, pillar, posts, edges, etc.
Scratch Mats	good value and low maintenance - minimum space requirement - flexible in use	cattle, calves, goats, horses, etc.	wall, pillar, posts, edges, etc.

Cattle Brush HAPPYCOW Duo

Through the extensive brushing, cleaning and massaging of the head, neck, back, torso and flank, the skin is better supplied with blood and the metabolism is stimulated. The 2-brush machine allows simultaneous cleaning of the flanks and the back.

• the cow cleaning machine is automatically activated by the animals slightly raising the brush • high-quality bristles ensure a long service life • optimised brushes ensure that animals are happy to use them • permanent lubrication over the gears' entire service life • intelligent electronics for fault-free and low-maintenance operation • control with clearly visible display to indicate the operating status • variable setting options for brush running time (10 - 300 s) • the changing direction of the brush after ever activation ensures even wear of the brushes • the torque safety shutdown stops the brush when it encounters too much resistance, ensuring safety in the barn • plug ready for connection to 230 V socket • all steel parts are hot dip galvanised

Cattle Brush HAPPYCOW MaxiSwing

Made in Germany

The special arrangement of the brush in the vertical direction makes the cleaning of the coat at the torso and head easier. The brush is accessible from all sides and rotates in every direction and nearly every angle, so each part of the animal's body can be reached. Furthermore, there is no risk of jumping up as with horizontal brushes!

• the HAPPYCOW Swing series is automatically activated by the animals slightly deflecting the brush • high-quality bristles ensure a long service life • optimised brushes ensure that animals are happy to use them • Continuous lubrication of the gear over the machine's entire lifetime • intelligent electronics for fault-free and low-maintenance operation • control with clearly visible display to indicate the operating status • variable setting options for brush running time (10 - 300 s) • the changing direction of the brush after ever activation ensures even wear of the brushes • the torque safety shutdown stops the brush when it encounters too much resistance, ensuring safety in the barn • plug ready for connection to 230 V socket • all steel parts are hot dip galvanised

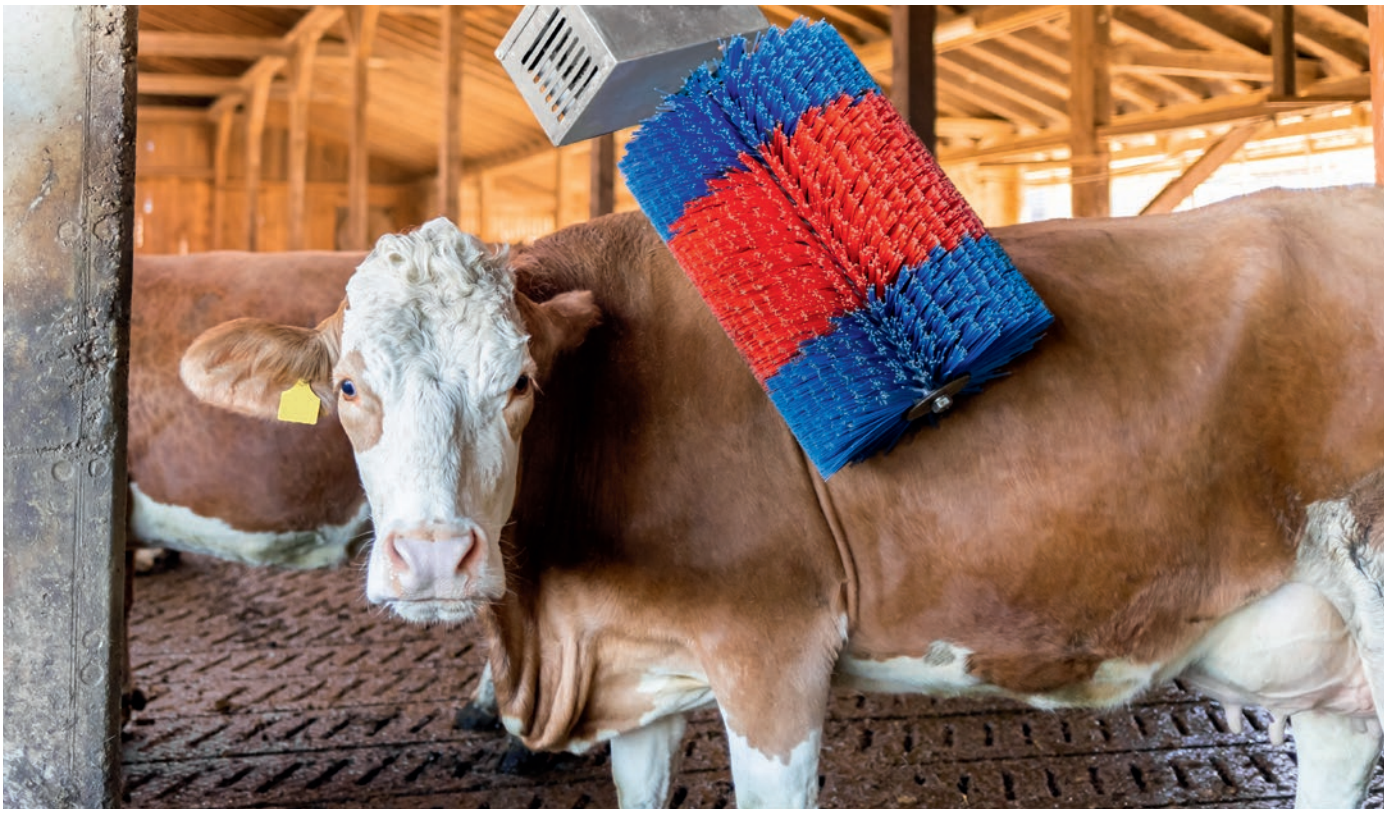

the new HAPPYCOW Swing series - developed and produced in-house by Kerbl
• The completely redesigned, patent-pending pendulum brush has a robust and maintenance-friendly construction, as well as newly designed control electronics. • The special arrangement of brush, drive and joint unit creates an optimised contact pressure of the brush on the animal and thus ensures an efficient and comfortable brushing process.

Scratch and Cleaning Mat KratzPad

the flexible mat for natural coat care - without any tools

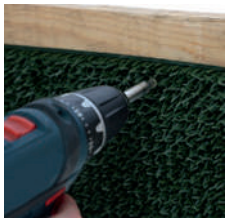

Made in the EU

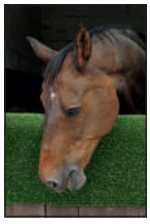

Simple, flexible and safe: the scratch and cleaning mat for horses and other animals with the skin-protecting structure. Thanks to its flexible design, can be easily installed on flat surfaces, over corners or on trees or posts.

- the mat's special structure prevents wounds and scratches to the animal, even with constant rubbing
- easy to install in stables, on fences, on tree trunks, on posts, on walls, etc.
- protects your infrastructure: nibbled box doors, damaged fence posts or nibbled tree bark can be easily avoided with the mat
- made from durable polyethylene
- not suitable for adult cattle

easy mounting with screws or nails

Can also be used as a cleaning mat:
• its resistance to chemicals means that the mat can also be used in boot disinfection baths for combined cleaning and disinfection
